

Page 5, between lines 11 and 12, please add the following new paragraph:

FIG. 5 shows the circuits for the present invention.

Please amend Page 9 by adding the following new paragraph after line 8 and before line 9 as follows:

The set top terminal 10 includes storage device 216 configured to continuously record a current video program. Set top terminal 10 also includes a detection circuit 400 configured to detect on-line connection of a communication event and to detect on-line disconnection and a recording circuit 410, operably coupled to storage device 216 and detection circuit 400, configured to record date and time of the on-line connection and a current channel number being viewed. In addition the set top terminal 10 also includes a selection circuit 395, operably coupled to detection circuit 400, that is configured to, when said on-line disconnection is detected, prompt for user input to allow a user to choose between continuing viewing the video program as it is currently being played at the time of said on-line disconnection and viewing the video program from the date and time recorded when the on-line connection was established.
